Discussions

You are given **two strings** S_1 , S_2 and **two integers** - start and end. Your task is to take the characters from the second string (S_2), starting at index start and ending at index end (inclusive), and add them to the **end of the first string(S_1)**.

All indices are 0-based.

Input Format

- The first line contains the first string S_1 .
- The second line contains the second string S_2 .
- The third line contains two integers start and end.

Constraints

- $1 \leq |S_1|, |S_2| \leq 1000$ - Here, $|S_1|$ means length of S_1
- $0 \leq \text{start} \leq \text{end} < 1000$

Output Format

Print the final string formed after adding the selected portion of the second string to the end of the first string.

Sample Input 0

```
hello
world
2 4
```

Sample Output 0

```
hellorld
```

Explanation 0

Characters of "world" from index 2 to 4 are "rld". After adding to "hello", the result becomes "hellorld".

Sample Input 1

```
good
morning
1 3
```

Sample Output 1

```
goodorn
```

Explanation 1

Characters of "morning" from index 1 to 3 are "orn". Result after adding → "goodorn".

Contest ends in 1 hour 13 minutes 14 seconds
