

Mirror Sum

Problem

Submissions

Discussions

Two brothers, Rafi and Shafi, love spending time together. Rafi, the younger one, has just learned the basics of programming and is super excited to solve real problems. Seeing his enthusiasm, Shafi, the big brother and a coding pro, decides to test Rafi's skills with a fun challenge. He gives Rafi two arrays A and B of the same size and says:

Take each number from the first array and add it with the mirrored number from the second array. That means:

The 1st number of the first array will be added with the last number of the second array. The 2nd number of the first array will be added with the 2nd last number of the second array. The 3rd number of the first array will be added with the 3rd last number of the second array... and so on. In short: For every position i , you add $A[i]$ with $B[n - 1 - i]$, where n is the size of the arrays.

Finally, print the result array. Rafi smiles and grabs his laptop. Can you help him solve this challenge and make his big brother proud?

Input Format

- First line: An integer n , the size of the arrays. ($1 \leq n \leq 100$)
- Second line: n space-separated integers, the elements of array A. ($-1000 \leq A[i] \leq 1000$)
- Third line: n space-separated integers, the elements of array B. ($-1000 \leq B[i] \leq 1000$)

Constraints

- $1 \leq n \leq 100$
- $-1000 \leq A[i] \leq 1000$
- $-1000 \leq B[i] \leq 1000$

Output Format

Print n space-separated integers, the result array after mirror sum.

Sample Input 0

```
3
1 3 4
3 2 5
```

Sample Output 0

```
6 5 7
```

Explanation 0

Array A = [1, 3, 4]

Reverse of B = [3, 2, 5] is [5, 2, 3]

Sum:

- $1 + 5 = 6$
- $3 + 2 = 5$
- $4 + 3 = 7$

Final result: 6 5 7
